<sup>a</sup> a.e. acid equivalent, lbs of glyphosate acid per gallon.

<sup>b</sup> AMS should be included at 17 lb/100 gal to improve glyphosate activity. For products that may need a surfactant, a non-ionic surfactant at 0.25% v/v is the typical recommendation. Consult the herbicide label to verify when a surfactant is needed and the type and rate of surfactant to include.

<sup>c</sup> Only labeled for over the top applications in *Roundup Ready* soybeans.
